Dear Grant

RE : Compliance to Australian Standards

Further to our discussion regarding supply of steel in accordance to standards. All BlueScope products are supplied in accordance with the relevant standard. In the case of the AS/NZS 1594-HA1 and AS/NZS 1594-HA250 products all material supplied is in accordance with the latest version of the AS/NZS 1594 standard and the relevant reference standards, e.g. AS/NZS 1365 – "Tolerances for flat-rolled steel products". Note that AS/NZS 1594 also references a number of standards that prescribe how the sampling, testing and certification of the product is to be carried out. These standards are an important part of compliance to the overarching standard – AS/NZs 1594.

All chemical analysis and mechanical testing of BlueScope Steel grades is conducted in NATA certified laboratories to ensure the correct testing procedures are used.

Yours faithfully,

A handwritten signature in black ink, appearing to read "John Dryden".
